IT Project Management & Governance
Our capabilities

The challenges about IT Project Management

Good Project Management is hard.

It needs to cover all aspects. It isn't just technology and may include resource backfill, specialist external help in certain areas, process/policy/procedure updates, testing and clear governance and control.

With real-world and practical experience of delivering multi-million transformation and change projects, plus an ever expanding Knowledge Base of lessons learned, Cloud Talent can help customers side-step the pitfalls and problem areas.

Feedback from the TReX forum

Recent feedback from Clients and our Customer forum (TReX) highlights a number of key challenges in the Project Management and Governance arena.

All see:

- Contractors being hired without defined outcomes and accountability
- Conflict with other projects for resource and change slots
- No time to do formal project close off and lessons learned analysis

Some see:

- Need for more rigour around Project Organisation and roles and responsibilities
- Need for improved stakeholder management and tracking versus desired outcomes
- Poor project controls to track quality and progress for communication to stakeholders
- Over-planning and too strict an adherence to project methodologies v pragmatism
- Lack of understanding or focus on real business priorities and impact
- Heavy reliance on resource that is running the day to day operations

The CloudTalent Approach

In our experience, a successful project or programme that meets its original time, cost and quality goals without compromising the intended scope, is achieved through the right balance of planning and delivery. It needs to be tailored to the required speed and appetite for risk.

We deliver a number of work packets which are designed to improve the speed and quality of delivery without service impact. We focus on delivering the expected outcomes using real time communication of issues and fast resolution. This is visible via constant updating of the business case to reflect latest status.
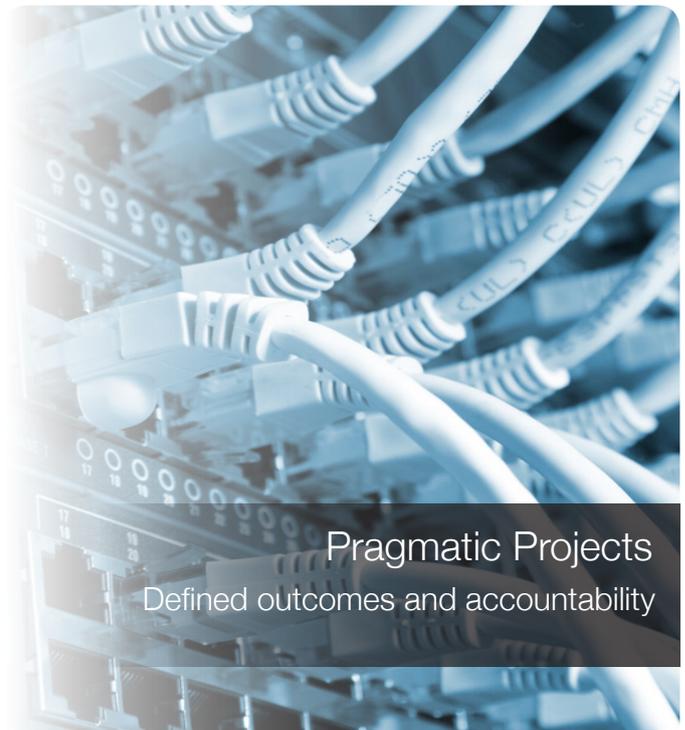

What to expect from CloudTalent

We provide a pragmatic approach allied with getting the scope, schedule, business case and resource planning correct at the outset. This ensures all stakeholder expectations are met. The clear focus is on execution and the quality of deliverables.

We utilise PMI Project Management Body of Knowledge (PMBoK) with a pragmatic, collaborative approach to its implementation and usage including integration, Scope, Time, Cost, Quality, HR, Risk and Procurement Management.

There are weekly formal and informal stakeholder reviews with constant updates to the project business case.

Following a successful delivery a formalised closure to ensure all parties' expectations have been met.

Pragmatic Projects
Defined outcomes and accountability
